

Ravenswood Forest Fence Standard

Revised June 15, 2007

Ravenswood Forest was designed as an open and green environment. This is why there are no power poles. There is a 15 acre preserve and two ponds on site. Nearly one third of the property is conservation area. We do not encourage fences. Fences permitted will be black aluminum flat top (no spires) fencing of 4 feet or 6 feet in height. A rail spacing of 1.5 to 3.5 inches apart is acceptable. These fences can start at the back corner of the house and go out to the property line on the sides and to the back property line as determined by survey. If privacy is desired, planting of shrubbery is encouraged; however shrubbery must be approved and maintained in accordance with the Ravenswood Forest Homeowner Association guidelines. A sample of fencing is on display in the future recreation area on the west side of the property. The sample fence was installed by Frank at Fence Works, phone 904 501-9215. A number of Fence companies in the area will install this type of fence and also stock it for the do-it-yourself project.
